megatonic made by Sisel

40 powerful antioxidants
74 *essential* trace minerals
vast array of multivitamins and phytonutrients
powered by organic fulvic acid

Sisel

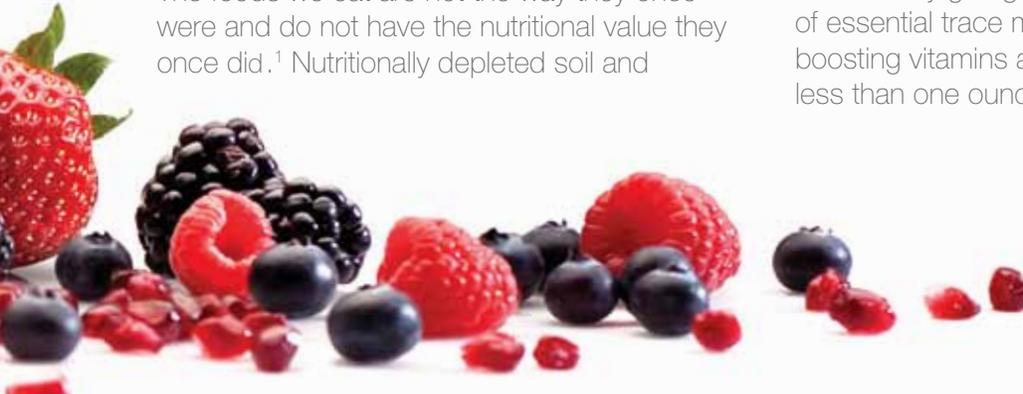

Give your body the power and protection it's been begging for.

Welcome to the 21st century: drive-thru's and processed, artificial foods dominate the nutritional landscape, and few of us actually eat the way we should. While we pat ourselves on the back when we do have time for a natural, home cooked meal or a piece of fresh fruit, even these "healthy foods" are surprisingly... hollow.

The foods we eat are not the way they once were and do not have the nutritional value they once did.¹ Nutritionally depleted soil and

thousands of man-made chemicals that have found their way into our food and environment mean that even when we think we're eating well, we aren't getting the nutrition we need to protect and sustain our bodies.

We believe SpectraMaxx fills the gaps man has created in the nutritional profile Mother Nature intended by giving you the widest possible array of essential trace minerals, antioxidants, energy-boosting vitamins and phytonutrient complexes in less than one ounce.

Mango | Lemon | Carrot
Onion | Cocoa Bean

White Tea
Sea Buckthorn
Grape Seed
Raspberry Seed
Turmeric
Copper
Zinc
Selenium
Manganese
Fulvic Acid

Goji Berry
Pomegranate
Raspberry | Tomato
Cranberry | Tart Cherry
Strawberry | Coffee Berry

40
antioxidants

Kiwi | Sprouts
Broccoli | Kale
Lime | Spinach
Brussel Sprouts
Green Tea

Mangosteen | Acai
Bilberry | Blueberry
Black Currant | Plum
Prune | Concord Grape
Resveratrol

40 intensely powerful antioxidants designed to protect you from thousands of man-made free radicals.

Can a single antioxidant defend your cells against thousands of unique free radical attackers?
We didn't think so either.

With hundreds of new man-made chemicals created each year, we now have over 2,200 groups of free radicals that assault our bodies every day. These rogue molecules cause cellular decay, corroding our bodies like a rusty old car. They accelerate aging and threaten our health. While scores of products extol the antioxidant benefits of foods like mangosteen, noni, açaí, chocolate, and green tea, how can we know which is best?

Because different foods have unique molecules that scavenge specific free radicals, no single 'super fruit' can address all the harmful free radicals our environment pummels us with every day. SpectraMaxx contains 40 highly concentrated, intensely powerful antioxidants that create the broadest spectrum of antioxidants the world has ever seen. No other product even comes close.

74 *essential* trace minerals

Perceived as vital for over 2,000 essential biological functions.

Bodies that work right just feel better.

The human body has about 2,000 biological processes that rely on trace minerals our bodies MUST have for proper function. Energy production, normal hormone function, oxygen utilization, enzyme creation, new cell formation, and healthy joint development are just a few of these fundamental tasks our bodies try their best to accomplish with what we give them. Sadly, most of the foods we eat are chronically lacking in essential trace minerals.

Agricultural practices that rely on herbicides and pesticides, combined with repetitive over-farming, have lead to soil that is dangerously toxic and drastically lacking in mineral content. Scientists estimate that modern foods contain about 75%

fewer essential trace minerals and nutrients than our ancestors received only a century ago. If we are what we eat, we may only be getting a fraction of the minerals necessary for health and longevity. Does this mean our bodies are functioning at only 25% efficiency? It could—scientists have linked approximately 60 common health damaging, life threatening, age reducing illnesses to trace mineral deficiency.

Just a single dose of SpectraMaxx gives your body the trace minerals it needs to support keeping up with the demands of the thousands of biological processes happening non-stop. And with an entire complex of vitamins, this fortified Megatonic provides all around nutritional support for extended vitality.

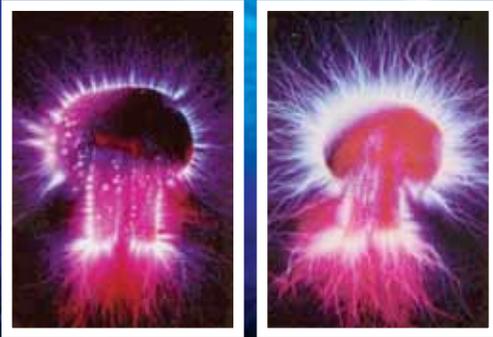

We put SpectraMaxx to the test!

Mushroom grown in nutrient mineral depleted soil.

Mushroom grown in organically fulvate-rich soil.

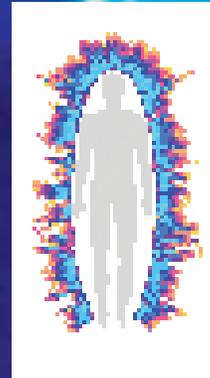

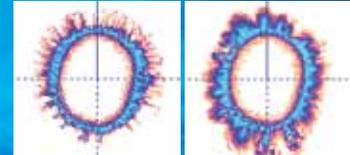

A Kirlian photogram creates a visual representation of the electromagnetic energy field that emanates from all living things. Supplementing soils, or the human body directly, with fulvic acid supports proper nutrient absorption and creates much stronger energy fields.

The circular shapes below are actual Kirlian photos of our test subject's finger before and after taking SpectraMaxx. After taking only a single recommended dose, our test subject waited 20 minutes and was scanned again. As you can see, the life force energy in the second image increased so dramatically you can actually see the difference!

Have you ever seen a tree growing out of a rock? Fulvic acid is so powerful that it enables plants to draw nutrients from even the rockiest soils.

Fulvic Acid. The missing link of modern nutrition.

Simply put, fulvic acid is one of the foundational keys to all life on Earth, and it's disappearing. By transforming minerals and other nutrients into minute ionic molecules small enough to be absorbed by the roots of plants, fulvic acid forms a necessary, although invisible link in the planet's food chain. Without it, plants wouldn't be able to use the nutrients found in soil to power important processes like photosynthesis and cellular respiration, and would die. No plants would mean no animals, and no us.

Again, man's quest for innovation has had a potentially catastrophic side effect no one could have seen coming: fulvic acid levels have been

dramatically reduced in agricultural soils around the world, making it even more difficult for the foods we depend on to provide the nutrition we need. Research is emerging that hints to connections between fulvic acid deficiencies and many of the common ailments that plague our health.

Fulvic acid not only makes SpectraMaxx more readily absorbable, but transforms it into a full body elixir perfect for naturally increasing energy and getting your body back to optimum function. Many researchers now believe that fulvic acid may support the body's natural ability to more favorably deal with illnesses, infections, and disorders that affect every system of the body.

A vast array of support for a host of common problems that threaten health and longevity.

100 years ago, our food had the nutrition we needed, and our bodies remained largely free from dangerous man-made pollutants.

While science has greatly extended our lives, it has also diminished the nutritional value of our food and created the toxic environment in which we now live. Evidence of the effect our environment has on our health is found in the increasing cancer rate. In developed nations, 1 of every 2 people will be diagnosed with cancer.² The American Cancer Society estimates that by the year 2050, every person born on earth will get some form of cancer.

If the trend continues, it won't be long before cancer is a given certainty for every single one of us. And though cancer has become commonplace, it was not always so. Researchers at the University of Manchester studied the preserved remains of hundreds of Egyptian mummies and uncovered only a single case of cancer. Their conclusion: Cancer is man-made.³

If so many health concerns are man-made, are they also avoidable? We believe so. Now, more than ever, we need a Megatonic like SpectraMaxx to provide the nutrition our diets lack and to protect our cells from the decay and corrosion caused by our environment.
